                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PRODUCED BY ALTERNATIVE SPLICING.

PRODUCED BY ALTERNATIVE SPLICING.

TISSUE SPECIFICITY: HIGHLY EXPRESSED IN BRAIN, ESPECIALLY IN

CEREBRAL CORTEX, THALAMUS, HIPPOCAMPUS, FRONTAL, OCCIPITAL AND

TEMPORAL LOBE, OCCIPITAL POLE AND CEREBELLUM, FOLLOWED BY CORPUS

CALLOSUM, CAUDATE NUCLEUS, SPINAL CORD, AMYGDALA AND MEDULLA.

WEAKLY EXPRESSED IN HEART, TESTIS AND SKELETAL MUSCLE.

DOWAIN: ALPHA-HELICAL PARTS OF THE C-TERMINAL INTRACELLULAR REGION

MEDIATE HETERODIMERIC INTERACTION WITH GABA-B RECEPTOR 1.

SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             L; AJ012188; CAA09942.1;

CC -!- FUNCTION: MAY HE INVOLVED IN CELL-SURFACE PROPELLIA I AND SUBJUNIT: INTERACTS WITH INTEGRIN ALPHAV-BETA3, ENDOPHILIN I AND SORTING NEXIN 9 PREFERENTIALLY

CC -!- SUBJUNIT: INTERACTS WITH INTEGRIN ALPHAV-BETA3, ENDOPHILIN I AND SORTING NEXIN 9 PREFERENTIALLY

CC -!- SUBJUNIT: INTERACTS WITH INTEGRIN OCCURS IN A SECRETORY PATHWAY

CC SUBGESTING THAT THE INTERACTION OCCURS IN A SECRETORY PATHWAY

CC COMPARTMENT PRIOR TO THE MEDIAL GOLGI.

CC -!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN. THE MAJORITY OF THE PROTEIN IS LOCALIZED IN A PERLNUCLEAR COMPARTMENT WHICH MAY

CC CORRESPOND TO THE TRANS-GOLGI NETWORK OR THE LATE ENDOSOME. THE CC PROTEIN IS THE MAJORITY OF THE PROTEIN IN THE CELL SURFACE,

CC WHEREAS THE MAJORITY OF THE PROTEIN IN THE CELL SURFACE,

CC HIESUE SPECIFICITY: HIGHLY EXPRESSED IN HEART, BRAIN, LUNG, AND COMMISSION OF THE PROTESSED AT LOWER LEVELS IN SPLEEN, LIVER, TESTIS AND COMMISSION.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN, EXCLUSIVELY ON T
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN, EXCLUSIVELY ON T
APICAL REGION OF THE SPERM HEAD (BY SINILIARITY).
TISSUE SPECIFICITY: IN TESTIS, PRIMARILY IN HAPLOID SPERMATIDS.
NOT IN LUNG, LIVER, HEART, SPLEEN, BRAIN, KIDNEY, EPIDIDYMIS.
DOMAIN: THE MAM DOMAINS PROBABLY MEDIATE SPERM ADHESION TO THE
ZONA PELLUCIDA.
                                                                                                                                                                                                                                                                                                                                                                                                                                               THE MUCIN-LIKE DOMAIN MIGHT INHIBIT INAPPROPRIATE TRAPPING OF SPERMATOZOA OR PROMOTING ADHESION TO THE OVIDUCTAL ISTHMUS. DOMAIN: THE VWPD DOMAINS 2 AND 3 MAY MEDIATE COVALENT OLIGOMERIZATION (BY SIMILARITY TO HUMAN INTESTINAL MUCIN MUC2). FROM THE MAM DOMAINS AND THE MUCIN-LIKE DOMAINS ARE MISSING FROM THE ZONADHESIN THAT BINDS TO THE EGG EXTRACELLULAR MATRIX.

SUBCELLULAR LOCATION: Type I membrane protein. TISSUE SPECIFICITY: CELL SURFACE OF THYMOCYTES, NEUTROPHILS, PLASMA CELLS AND MYELOMAS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               EVINCTION: ONE OF THE MAJOR GLYCOPROTEINS OF THYMOCYTES AND T
LYMPHOCYTES. PLAYS A ROLE IN THE PHYSICOCHEMICAL PROPERTIES OF
THE T-CELL SURFACE AND IN LECTIN BINDING. PRESENTS CARBOHYDRATE
LIGANDS TO SELECTINS. HAS AN EXTENDED RODLIKE STRUCTURE THAT COULD
PROTRUDE ABOVE THE GLYCOCALYX OF THE CELL AND ALLOW MULTIPLE
